Company machineries :-

The company owns a compatible fleet of heavy equipment and machineries which are used in implementing contracts with the beneficiary companies . Can be detailed as follows :-

a- (8 X { 36000 – 40000 Liter }) pelvic used for transporting fuel. / b- (12 X { 11000 – 14000 Liter }) pelvic used for transporting fuel.

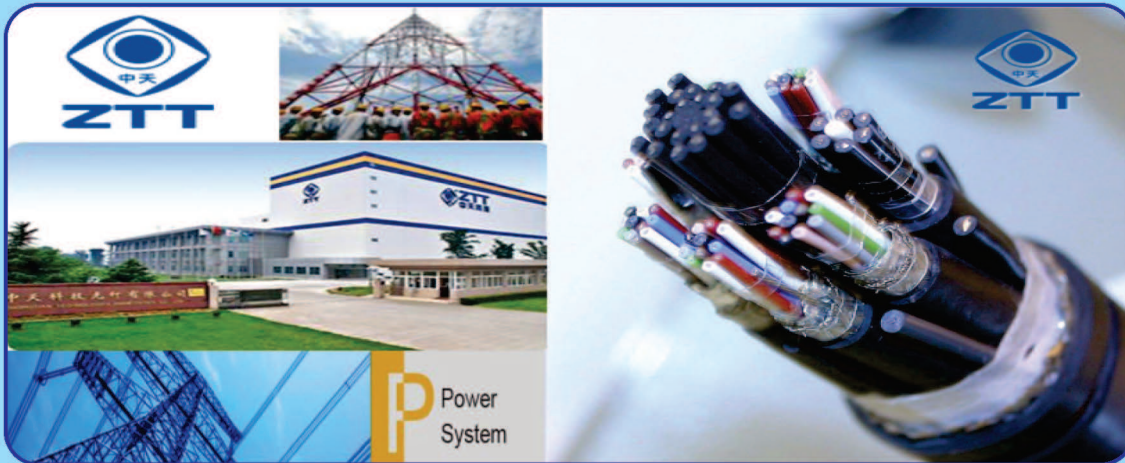

Note that these trucks are equipped with modern gages (Smith) type and a German fuel pumps imported a specially for that purpose & prepared with all the technique required ,with a special cadre work on them with high standards of safety .

These pelvic are able to raise fuel up to (80) vertical meters , and were equipped with (16 – 80 meters long) hoses which are packed a long automated roller to make it easy to mobilized in to narrow streets that are difficult to be entered by big trucks .

c- (10 X { 4000 – 8000 Liter }) pelvic used for transporting fuel. / d- 12 (tipper lorries) used to transport goods and cargos from and to the storages .

e- (2) towing cranes . / f- (13) Double hard top pickups used to transport teams and materials . / g- (3) fork lifters .

The companies exclusive agencies and our trade partners :-
 Our company is characterized with its singularity possessing a group of exclusive agencies from global companies , as follows :-
1 – Exclusive agency for all parts of Iraq from (GAM ARAK Persian co.) specialized in manufacturing and installing high voltage electrical towers (400 , 230/63 , 230 , 132 , 63) KV , as well as the communication towers .
 This company conceded one of the biggest Persian companies in that field that got contract implemented in most of the Middle east .
2- Exclusive agency for all parts of Iraq from (ZTT international limited Chinese company) for producing electrical and fiber optics cables & special electrical materials , as well as special fiber optic cables with different diameters (freezing ,sand ,lightening , high pressure) resistant .
3 -Exclusive agency for all parts of Iraq from (HEBEI company) for electrical isolators .
 A Chinese company specialized in electrical isolators field (different types) as well as high lines and energy transporting products & sub products , & pole system products , spare parts , valves , isolators , electrical safety products ,and plastic products .

4 -Exclusive agency for all parts of Iraq from (WENFU TRANSFORMERS Chinese company) .

One of the pioneer companies specialized in energy and transformers field since 1986 .

5- Exclusive agency for all parts of Iraq from (HUATONG CABLE CO.LTD)

A well known Chinese company , founded at 1982 , specialized in the production of electrical cables and wires as well as different kinds of control cables , aluminum and steel cables that is used for very high voltage , partitions of energy cables and partitions of wires from all types .

6 -JOTEC CHINESE COMPANY agency

A company specialized in manufacturing different types of heavy machineries (loaders , graders , steam rollers , fork lifters , and tractors)

7 - HENAN HUAXING WIRES & CABLES CO. LTD agency

A Chinese company specialized in manufacturing electrical cables (Exclusive agency for all parts of Iraq) .

8 - Exclusive agency for all parts of Iraq from (FUJIAN JINGONG MACHINERY CO. LTD)

A company specialized in manufacturing different types of heavy machineries (loaders , graders , steam rollers , fork lifters , and all kinds of machineries)

9- our company got a true partnership with (Damisk Syrian company) for manufacturing and trade

One of the (shammot group) which is a pioneer company in the field of manufacturing and trading steel .

This company is working under a delicate global slandered wit greet efforts in following to keep the slandered of quality , it also has the certificate of quality administration system (Iso 9001:2000).

And also which contributes in the success of this company is their dependence on the Syrian and Arabic as well as foreign experiences .

As for the Quality : the company depend multiple modern systems in observing quality in all stages of production .

The company build a modern factory for steel pipes in Syria , started to produce in 2002 .

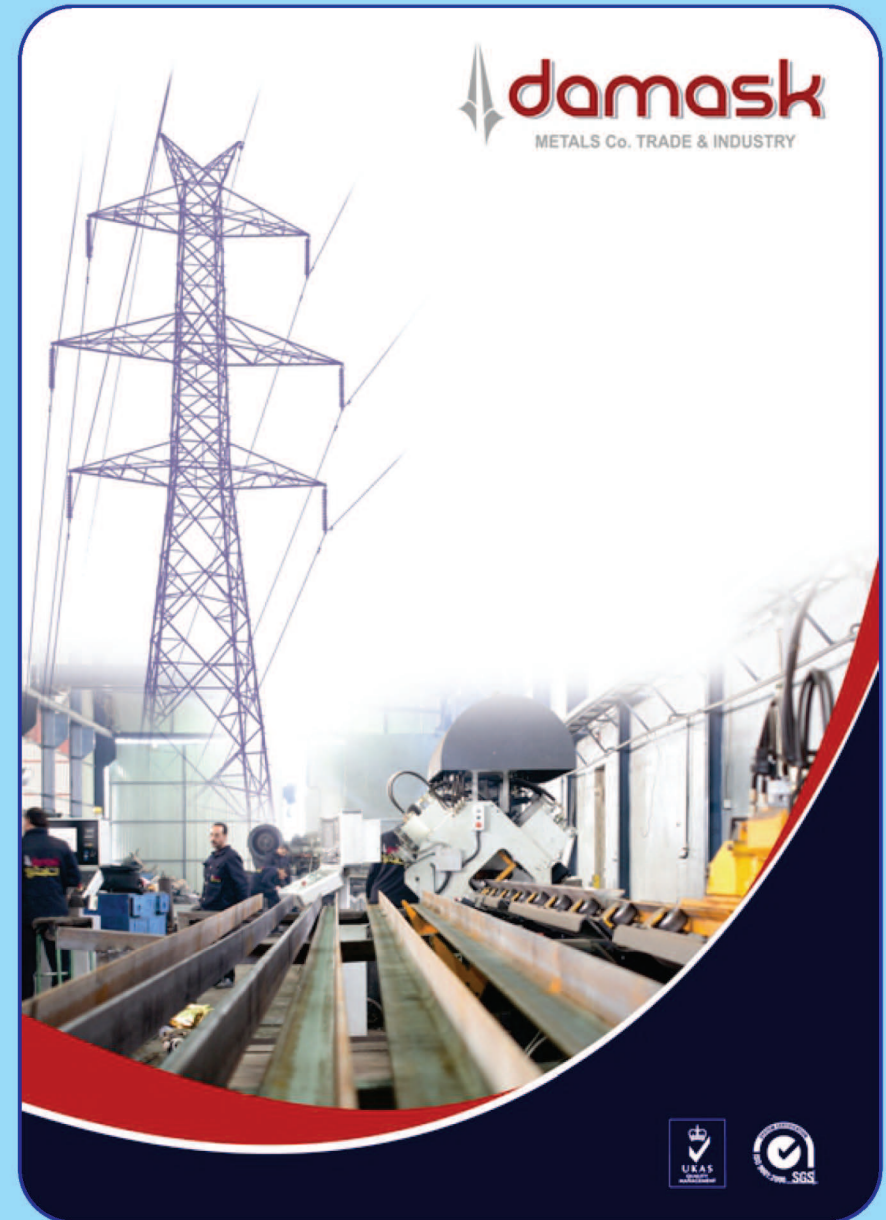

The factory is producing all kinds of steel pipes as well as welded squares by using a high advanced Italian technology , according to the global standard , that will allow the Damisk company to provide its clients with a variety of products with different specifications that matches the requirements of the local market .

The company also build a modern factory for building power transporting and dispatching , started to produce 2004 .

The factory produce electrical towers from (66 Kv to 800 Kv)as well as microwave communication towers .

The design of the towers is done according to the most recent French programs ,and after that the tests will be done .

The tower parts is manufactured threw automatic producing lines (CNC)provided with modern Italic machineries that are run by computers and galvanized according to the client request and the global slandered

Qimmat Ataa Al-Aseel

Qimmat Ataa Al-Aseel

The company works and projects :-

- 1 – Project no.(601/1945) Implementing four residential houses for Al Risafa governmental mill for the interest of the ministry of trade in Baghdad , the project were implemented at 2012 .
- 2 – A contract was made with Fajr al-iman group to provide them with the following :-
 - A – Different types of electrical generators .
 - B – Heavy machinery (loaders , graders , steam rollers , fork lifters , and street paving machineries) , the providing of these machines was on a daily rent bases .
 - C – Spare parts for the electrical generators with all it details .
 - D – Oils for all types of machinery and equipment .
 - E – Electrical systems and materials .
 - F – Computers with its attached systems .
 - G – Spare parts connected to trucks and all heavy machineries.
 - H – Stationery and office materials .
- 3 – Implementing a project in Karbala (building and installing an electrical line 1 NT) , by the companies technical cadres , all the materials used in the project was from the exclusive Chinese agencies owned of the company .
- 4 – Implementing a project in Misan (building and installing an electrical line 11 NT) , by the companies technical cadres , all the materials used in the project was from the exclusive Chinese agencies owned of the company .

- 5- Implementing (Damisk 1) project with Damisk Syrian company for producing iron and steel and towers . They were provided with 15 high tension power towers for transporting electrical power type (2T2) (132 Kv) with all embranchment, and 20 tower type (2E2) . The contract was for the interest of the Iraqi electrical ministry , completely delivered at December 2013.
- 6 - Implementing (Damisk 2) project with Damisk Syrian company for producing iron and steel and towers . The contract was for the interest of the Iraqi electrical ministry ,they were provided with high tension power towers for transporting electrical power , this contract was implemented at 2014 , and as follows:-
- A- 45 towers type (2T2) (132Kv) with all embranchment . / B- 12 towers type (2E2) (132Kv) with all embranchment .
 - C- 5 towers type (2SP2) (132Kv) with all embranchment. / D- 12 towers type (2R2) (132Kv) with all embranchment .
 - E- 10 towers type (2K2) (132Kv) with all embranchment. / F- 200 towers type (XA) (400Kv) with all embranchment.
 - G- 67 towers type (XB) (400Kv) with all embranchment. / H- 32 towers type (XC) (400Kv) with all embranchment
 - I- 20 towers type (XD) (400Kv) with all embranchment. / J- 6 towers type (XE) (400Kv) with all embranchment

7 – Construction works and paving streets & supplying of gravel and sub base for the (The sport city at Basra governorate)

A contract was made with one of the Iraqi local companies to implement the (sport city project) .

This project is considered a big and a unique project in Iraq , and our company characterize in implanting this project according to the global standards .

The company implanted the following :

(Equalizing the ground ,treatment of the soil , filling and steam rolling , preparing the work site , supplying sand & gravel and sub base materials as well as asphalt to the work sites , supplied from the company own resources and transported by our own fleet .

8 – A contract with Qimmat al-iqtidar engineering company to provide lojistic support for (Atheer- ZAIN) COMUNICATION COMPANY , an annual contract ,renewable every 2 months for adjusting prices according to market changing .

The contract conclude the following :

A – Supplying (Zain) towers with fuel that guaranties its working 24/7 with out stopping .

The towers that is under our responsibility are that in (Baghdad , Babylon , Najaf , Karbala , and Basra) .

B – Maintenance for the generators in these towers with all details (changing air & gas and oil filters , daily & weekly & monthly maintenance as well as replacing damaged parts and complete overhaul .

C – In case of malfunction of any of the generators or it got out of work , the is to be provided with a (mobile generator)from the storage of the company till it has repaired .

D – Daily repairing and maintenance of the cooling systems in the inner shelter of the tower .

9 – A contract for manufacturing steel and steel plates for the bases of the (2T2) towers for the connection line between North Amara (400 Kv.) within the project of connecting North Amara (132 Kv.).

Project completed at August 2014.

10 - A contract for (constructing , Installing , Wiring) four towers { 2 (2T2) type numbered (103 & 104) , and the other 2 are (2E2) type numbered (104 & 105) for the project of connecting North Amara (400 Kv.) within the project of connecting North Amara (132 Kv.).

11 – Contract No.(1559) Implementing of the concrete bases (Providing materials and work)as well as constructing a tower (2T2 Type) for the project of connecting North Amara (400 Kv.) . Finished at September 2014.

12 - Contract No.(1579) Implementing of the concrete bases (Providing materials and work)as well as constructing a tower (2T2 Type) for the project of connecting North Amara (132 Kv.) . Finished at September 2014.

Qimmat Ataa Al-Aseel

13 - Contract No.(1564) Implementing of the concrete bases (Providing matrials and work)as well as constructing a tower (2S2 Type) for the project of connecting North Amara (400 Kv.) .
Finished at September 2014.

14 – A contract with (Omnea communication company) for the year 2012 – Supplying towers with fuel that guaranties its working 24/7 with out stopping .
The towers that is under our responsibility are that in (Baghdad , Babylon , Najaf , Karbala , Anbar , Koot , Diwania , Samawa , Dhi qar , Missan and Basra) .

15 - A contract with (Omnea communication company) for the year 2013 (same as the above contract details .)

16 - A contract with (Omnea communication company) for the year 2014 (same as the above contract details .)

17 – The contract with (Omnea communication company) was renewed for the year 2015 (same as the above contract details .)

Qimmat Ataa Al-Aseel

18 – The project of paving 8 streets in Basra governorate :

Our company with Bambosh Indian company implanted the project in 2014 of paving (8) main streets in Basra

The work were done with the two companies own cadres and machineries, with high accuracy according to required specifications.

The governor of Basra has opened the project, and of the governorate representative attended the opining party, most of the media & TV channels covered the opining, with a big citizen crowd.

Here are the streets that were totally implanted and coated:

A - (IBN-GHAZWAN HOSPITAL STREET):

Considered one of the main streets in Basra for its vital location and because it contains a lot of government departments, organizations, foundations.

This street connects al-Jazaer Street with the street that leads to al-Teyeran arena, with a full area of (12572 square meters) totally coated.

B - Al-Janabi street:

One of the oldest streets in Basra were recoated and re-qualified.

It connects the Motaiha cross roads with the beginning of al-Kawwaz mosque yard.

(14000 square meters) area.

C - The child hospital street: It begins from the building of the child hospital in Qibla to the cross roads in al-Jamea neighborhood in Qibla with a total area of (24358 square meters) totally coated by our cadres.

D - Al-Motaiha street : This road begins from al-MotAIHA cross roads to the shrine of (Said- Adnan)two ways (coming and going)with a total area of (18193 square meters) , totally coated by our cadres.

E - Al-Zeytoon street: This street begins at (Said-Adnan shrine)and ends at Baghdad street,connects between Hamdan and the Sahat Saad bridge with two ways with a total area of (25420 square meters) , totally coated by our cadres.

F - Al-Bareed Street: One of the vital streets in Basra, located at al- Qibla with a total area of (19965 square meters), it begins from al-khaleeg alaraby gas station and ends at al-bareed cross roads.

G - Al-Qibla Street: One of the vital streets in Qibla with a total area of (18340 square meters) , totally coated by our cadres and delivered.

H - Al-Asdiqaa neighborhood street: With a total area of (18340 square meters) , totally coated by our cadres and delivered in time.

Concrete producing factory MEKA:

We own a compatible factory in Basra build by MEKA global co. and our production is under all terms and global tests that were put by the specialized department.

The factory works with a capacity of (120mtr/H) and its model is 2014 and followed is a short view about the factory:

Concrete mixers (MEKA type)

The most accentuated thing that recognize Meka stations from the others is their mixers that considered the most sophisticated by the makers of ready to use concrete

For its anti friction blades and the ability of axis arm and its deferent capacities.

Build- in concrete station:

An easy moving and building station cause of its hardness and high quality

Immobile concrete station:

Meka experience and its superiority in that field makes unique Immobile concrete station that is been used in the biggest projects in the world.

Portable concrete stations:

MEKA portable stations is a well known name all over the world with its huge success for that it was exported for 60 countries in four continents, delivering and working was successful even in bad and hard weather and climates.

Immobile concrete station:

The portable and immobile concrete stations of MEKA got a special design and structure and MEKA is known with it's (after sale services) for its agents (technical & maintenance) 24/7 without any discontinuation, there for MEKA mixers became a trade mark in that field.

MEKA company deals with companies that got a big trade marks in the field of making portable and importable and compatible concrete stations, for example valves and shakers are (WAM), hydraulics and air and air cylinders are (FESTO), and all materials that are used in the automotive system are (SIEMENS)

Because of the unique experience and the using of high developed technology MEKA is making unique type of concrete stations.

Our product that we supplied our customers with at all work sites was favorable for its fine quality and the accuracy of quantities used and fine raw materials.

For that the request for our products became more and is growing ever since.

Qimmat Ataa Al-Aseel

A final word

Threw this short view and threw our total trust in our companies capabilities with its possessing of modern machineries & equipment ,specialized cadres and exclusive agencies for global companies , our accumulated experience build threwe years of hard work by implementing different types of contracts big middle and small ones ,we are happy to announce with complete confidence that we are ready to implement all kinds of projects and contracts which is in our field of expertise for the interest of all companies , foundations, and local or governmental investment companies that works in Iraq as well as the local companies that works represent the private sector .

We promise every one that our main working logo will be (accuracy , honesty , loyalty , and the true intention to participate re building our beloved country Iraq)
